

## Environmental Policy

In Cencosud Shopping we work daily with **passion, respect, transparency and trust**. Our vision of the business is based on **incorporating sustainability into the basis of our management and from a "Pure Commitment"** that we have established in front of our stakeholders, today we have a Sustainability and Environmental Policy Strategy, **aligned to the Corporate Strategy of Cencosud S.A.**, which reflects an integrated work; projecting that our growth goes hand in hand with an impeccable operation, through brands in tune with their environment and seeking to generate a memorable experience, through ethical and inclusive relationships with our stakeholders, consistently integrating the **environmental and social performance of our business in the countries where we operate.**

Our Sustainability Strategy is based on 4 focuses, which aligned to the Climate Change Strategy, formalize the commitment based on the generation of a greater **"Environmental Awareness"**, which guides our action within the different areas of the company.

We are aware that the care of the environment is a growing concern for people and organizations, as well as the greater attention on the management of waste that is generated daily. At the same time we are challenged by climate change, a phenomenon that has been increasing in recent years, causing negative effects on the environment and our natural resources.

For this reason, and as part of our commitment to Sustainability, at Cencosud Shopping we promote the care, respect and protection of the environment. In consideration of the implications that our operations have in the environment, we are committed to promoting best practices throughout our value chain, including in this look our workers, suppliers, customers and community, managing with a global vision, the different initiatives we carry out to take care of the environmental impact of our activities, through an efficient use of resources, a proactive waste management and the installation of an environmental culture in all our stakeholders.

The care of the environment is assumed as a primary value for the Sustainability of our operations, at all stages of the life cycle of our facilities: 1.Pre-feasibility and construction, 2.Operation, including maintenance and remodeling, 3.Sale; in addition to the consideration of the new facilities resulting from acquisitions and mergers, carrying out different control measures.

## That is why we have established the following commitments:

- Promote the efficient use of resources and proper environmental performance in our operations, establishing baselines for its management and maintenance programs.
- Measure, manage and reduce the Carbon Footprint of our operations at a regional level.
- Establish Energy Efficiency programs in our operations.
- Based on the Strategic Declaration of Corporate Water Reduction, Cencosud Shopping has implemented an Action Plan for the Efficient Use of Water Resources, which aims to achieve the defined objectives: reduction in consumption, efficiency in the use and search for new sources while maintaining the good use of short-term services, medium and long term, all this, always ensuring the correct maintenance of our facilities.
- Comprehensively manage our waste, promoting its reduction, reuse and recycling thus reducing the final disposal in landfills.
- Promote awareness among our stakeholders about the care of the environment and natural resources, through campaigns and initiatives such as the responsible consumption of drinking water, the promotion of recycling, the provision of clean points in our premises, among others.

As part of our commitment to be a transparent and reliable company, we seek that our brands identify the impacts of their operation and communicate internally and externally how they measure and manage them against their environmental, social and economic performance. In this line, we assume a real responsibility in compliance with current environmental regulations.

In Cencosud Shopping we are aware of the importance of the rational use of natural resources, which requires constant management and continuous improvement that allows us to contribute to the protection of the environment. For this reason, it is essential to periodically review and measure these commitments, so that all our work progresses in balance and harmony with the environment and society in which we operate.
